

Project Initialization and Planning Phase

Date	6 July 2026
Team ID	SWTID-2026-5556
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statement:

Problem Statement 1 (The Applicant Perspective):

I am an individual applicant applying for a credit card online. I am trying to get a quick decision on my application to manage my expenses. But the bank's process takes too long due to slow manual paperwork verification. This happens because traditional risk evaluation systems cannot process customer financial data in real-time. Which makes me feel frustrated and uncertain about my approval status.

Problem Statement 1 (The Bank Officer Perspective):

I am a banking risk assessment officer processing hundreds of applications daily. I am trying to accurately check every applicant's creditworthiness to prevent bad loans. But manually cross-referencing credit scores and income data takes hours and increases human error. This happens because our bank lacks an automated machine learning model to quickly filter profiles. Which makes me feel stressed and overworked.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An applicant applying for a credit card online.	Get a quick decision on my application.	The bank processes applications manually, causing delays.	Traditional systems cannot evaluate financial data instantly.	Frustrated about the long wait times.

PS-2	A bank risk assessment officer.	Evaluate applicant creditworthiness accurately	Checking scores and income data manually take hours.	The bank lacks an automated machine learning system.	Stressed and overworked by the daily volume.
