

Project Demo Planning

Date	11 July 2026
Team ID	SWETID-2026-5556
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Marks

Project Demo Planning:

S No	Demo Section	Description	Duration (mins)	Responsive Member
1	Project Introduction	Introduce the project title, define the problem statement regarding manual credit checks, and outline the presentation structure.	2 mins	Tarini Jayasri
2	System Architecture	Walk through the two-tier Flask client-server architecture, mapping data flow from HTML forms to backend validation logic.	2 mins	Tarini Jayasri
3	Live App Walkthrough	Run the local server live, input low-risk parameters to show the green approval banner, and test high-risk edge cases.	4 mins	Tarini Jayasri
4	Code & Constraint Review	Share the code editor view, focusing on the /predict API route handling and input validation guard rules.	2 mins	Tarini Jayasri
5	Limitations & Future Scope	Discuss current scaling limits (local execution) and present the future database/Machine Learning roadmap.	2 mins	Tarini Jayasri
6	Q&A Session Readiness	Address panel questions regarding logic rules, choice of frameworks, and data testing procedures.	3 mins	Tarini Jayasri

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Frame the need for automation in subprime credit evaluations to capture the panel's attention early.
2	Solution Overview	Keep it high-level; visually emphasize how Flask securely links your form parameters to the rule engine.
3	3Live Feature Demonstration	Crucial Step: Ensure the terminal is pre-loaded and the local development server is running smoothly before the timer begins.
4	Q&A Session	Listen closely to feedback about the hardcoded bounds, and use the scalability plan points to answer confidently.
